

MEMORANDUM

TO: Secretary Pete Hegseth

FROM: Jonathan Roberts

DATE: May 2, 2026

SUBJECT: Portfolio Justification and Design Strategy

PORTFOLIO ACCESS

The digital portfolio detailing my technical and strategic project history can be accessed here: <https://aitechroberts.github.io/>

My website portfolio is designed to present me as an AI engineer focused on autonomous systems, applied artificial intelligence, platform architecture, and defense technology. The intended audience is hiring managers, technical recruiters, engineering leads, and organizations working in AI, robotics, government technology, or defense innovation. Because these audiences value both technical ability and practical impact, I selected projects that show not only what I built, but why the work mattered.

The portfolio's structure is simple and direct: an introduction, project section, resume, memo, and contact information. This organization allows visitors to quickly understand my professional identity and then review evidence of my skills through selected projects. The project descriptions emphasize concrete technologies, measurable outcomes, and real-world applications. For example, projects such as SemanticSpace, Speculative Diffusion, the Agentic Government Proposal Generator, and Edge-Deployable CamoGPT demonstrate my experience with AI systems, robotics, diffusion models, LLM workflows, and secure deployment environments.

I intentionally kept the design clean and professional so the content remains the focus. The site avoids unnecessary visual clutter and uses concise descriptions to make the portfolio easy to scan. This supports the needs of busy professional readers who may only spend a short time reviewing the site.

Overall, the portfolio functions as a targeted professional communication tool. It connects my education, military background, technical experience, and project work into a clear narrative: I build applied AI systems for complex, real-world environments. The design and content choices support that message while making the site useful, credible, and easy to navigate.
